Binary stars

Binary System

=

a system of two objects in space (usually stars), which are so close that their gravitational interaction causes them to orbit around their common center of mass.

According to this definition, almost all stars are binaries (or multiples). The Sun is one of the exceptions.

Sizes in the Universe

small?

intermediate?

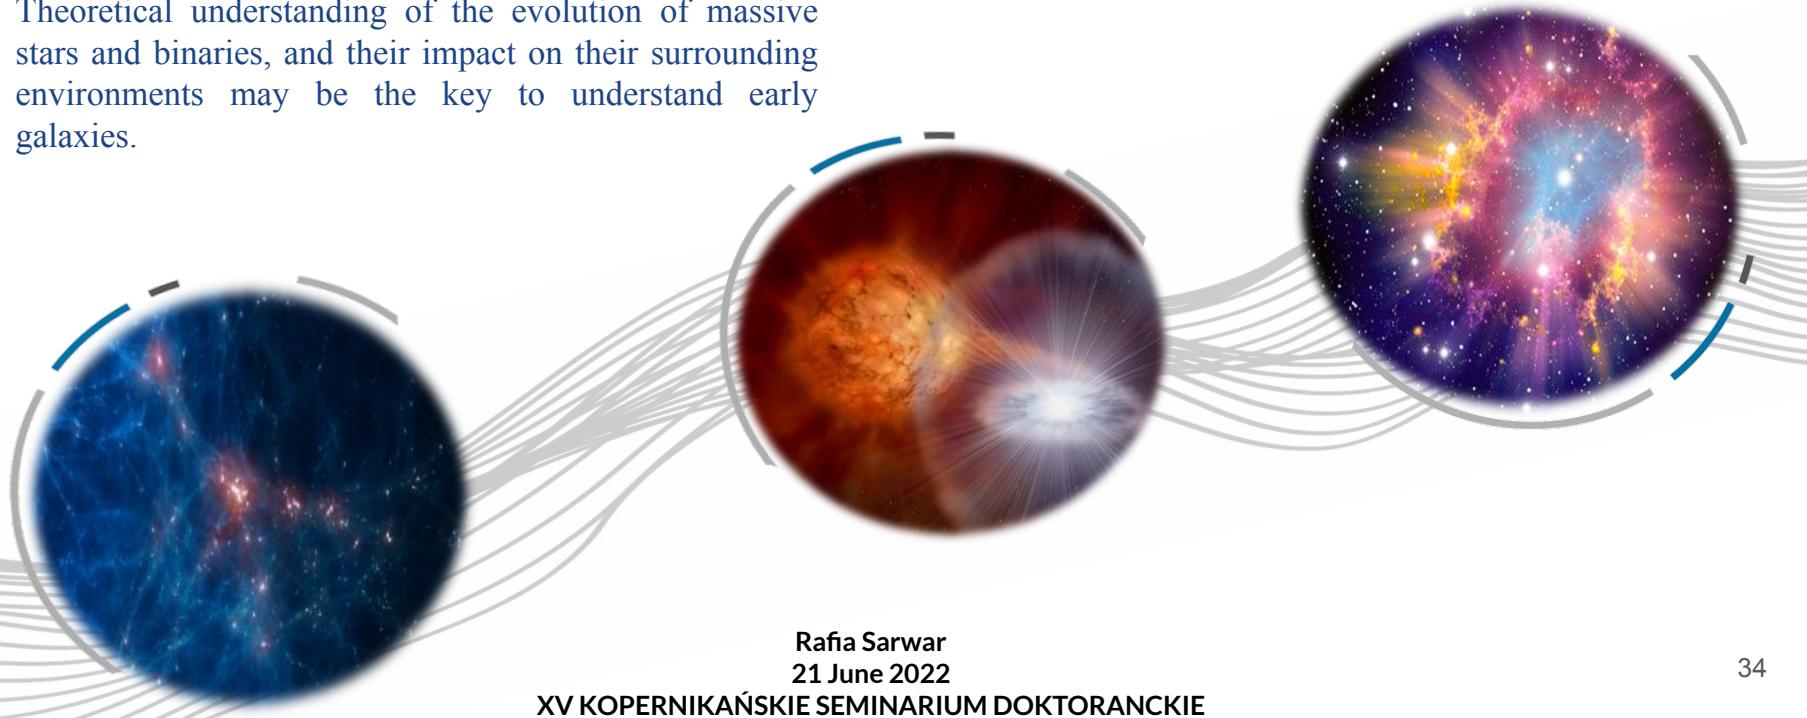

large?

cosmological
small scales

Take home message

Theoretical understanding of the evolution of massive stars and binaries, and their impact on their surrounding environments may be the key to understand early galaxies.
